

Back-Up Brushes

Multi-wall bag, plastic web and film manufacturers are rapidly replacing metal Anvil rolls with **Finzer Roller's Back-Up Brushes**. Our latest innovation has completely changed hot and cold pin perforating, razor slitting and cross-hatch scoring of plastic, paper, film, flexible packaging, and corrugated board products.

Back-Up Brushes

"Wrapping films over a brush roller rather than a grooved and hardened-steel roll greatly reduces setup time and prevents blade damage and potential loss of cut-edge quality."
AIMCAL® Source Book 2012...

Back-Up Brush Pin Perforating

Benefits

- Superior slitting and perforating quality
- Bristles accept perforating pins and knives without damaging brush
- Reduces set-up time when changing web widths or perf patterns
- Pins or knives do not damage bristles
- Fitting or adjusting to match pin and knife points is eliminated
- Misalignment of pins and knives is virtually impossible with free-wheeling back-up brush
- Supports board and web without scratching the surface
- Less expensive and often better than a metal Anvil roll
- Increases blade and pin life

Features

- Extremely uniform density, presenting individual strands of bristle rather than bristle clumps or tufts
- Controlled brush density allows unlimited bristle patterns from "Open" to "Super Dense"
- Light weight designs
- Quick change designs with external or internal bearings
- High temperature designs available
- Disposable or recoverable designs available
- Established brush stiffness and density standards, the proper "Brississity™" for many applications
